...

Site Plan.

The site plan of The Nest showcases a well-thought-out layout. The main building, office, restaurant, and oval-shaped wading pool form the central features. Adjacent are the practical amenities, including the laundry and parking area, all surrounded by a beautifully landscaped design. This thoughtful arrangement ensures a harmonious blend of functionality and aesthetics for an inviting experience.

The Nest

Welcome to The Nest

Where luxury and nature converge in the heart of Arusha!
Our two-story architectural masterpiece is inspired by the elegance of nature, utilizing bird nests as our primary inspiration. Each of our ten guest rooms boasts oval-shaped windows and balconies framing captivating views of Arusha's stunning landscape. Wake up to the warmth of natural light and immerse yourself in the beauty that surrounds you.
The Nest's thoughtful design ensures a seamless connection between indoors and outdoors, offering an intimate experience with nature. Luxurious furnishings and state-of-the-art amenities in every room elevate your stay to a level of unparalleled comfort.
Communal spaces, including stylish lounges and an open-air terrace, provide perfect setting to unwind while soaking in the breathtaking scenery. The Nest isn't just a building; it’s a conceptual escape into a world where architecture and nature coalesce.

The Nest

Interior

Given at primary inspiration was to have Bedroom with a comfort and security of a birds Nest offering panoramic uninterrupted views of nature.

The idea is no matter where you are in this room you feel the warm embrace of nature and the security of being softly held.

Embracing the texture and colors of the natural world with INTENTIONAL DESIGN was our goal.

The Wading Pool

Oval Shaped Wading Pool

Create a small boutique wading pool in Arusha, offering a serene and refreshing environment that accommodates up to 20 people comfortably. The pool should serve as a relaxing escape from the heat while drawing design inspiration from the playful atmosphere of bird-friendly wading pools.

Capacity: Accommodate up to 20 persons in relative comfort.

Refreshing Atmosphere: Provide a cool and inviting environment for guests to escape the heat of Arusha.

Bar and Spa Facilities: Include a bar for refreshments and a small spa area for additional relaxation.

Avian Aesthetic: Draw design inspiration from wading pools enjoyed by birds to create a visually appealing and playful atmosphere.

Shallow Pool Design: Create a shallow pool with varying depths to cater to different preferences and age groups.

Incorporate gentle slope entries for easy access and comfort.

Natural Elements: Integrate natural materials such as smooth stones, pebbles, and native plants to enhance the organic feel. - Design the landscape to mimic a bird-friendly environment, with areas for sunbathing and shade.

The Office & Guard House

The Office

The small office space at the lodge boasts an open and collaborative layout, designed to foster a sense of teamwork and communication among the staff. The airy ambiance of the open space allows for a conducive work environment, encouraging creativity and productivity. Adjacent to the main workspace is a well-organized storage room, providing ample space for keeping supplies, equipment, and other essentials neatly tucked away. Additionally, the office features dedicated changing rooms for the staff, ensuring a comfortable and private space for them to prepare for the day or unwind after work. The thoughtful design of the office aims to cater to the practical needs of the team while maintaining a welcoming and efficient atmosphere.

The guard house

The guard house is equipped with a specialized water filtration room, housing an advanced water filtration system designed to ensure the provision of clean and potable water for the facility. Nestled within this dedicated space is a cutting-edge filtration system that efficiently removes impurities and contaminants, guaranteeing a safe and reliable water supply. The room is meticulously designed to accommodate the technology required for water purification, creating an essential infrastructure that contributes to the overall well-being of the environment. With a focus on providing a sustainable and healthy living or working environment, the guard house's water filtration room stands as a testament to the commitment to quality and safety.

NEXT

STAFF ROOMS

The Nest Building features two-person rooms on both its right and left sides, accommodating a total of four staff members. These modern spaces are designed for functionality and comfort, providing ergonomic furniture, ample natural light, and smart technology integration. The mirrored design philosophy ensures consistency, balance, and a cohesive aesthetic throughout the building. The intentional arrangement of two staff members per room promotes collaboration, with each occupant having their dedicated workspace for a harmonious blend of individual focus and teamwork.

NEXT

INFRASTRUCTURE

The foundation of our sustainable infrastructure begins with harnessing the power of the sun. On the roof of The Nest Building, we proudly install solar panels, a symbol of our commitment to eco-friendly practices. These panels soak up the abundant sunlight of the savannah, transforming it into a renewable energy source that powers our entire facility.

Delving into the heart of our design, the batteries responsible for storing this solar energy find a discreet home beneath the staircase. This strategic placement optimizes space utilization and ensures a seamless and organized power supply to keep our lodge running efficiently, day and night.

As we turn our attention to the generator, it takes a respectful position near the office building. By placing it away from the main guest areas, particularly the restaurant, we prioritize a serene ambiance for our guests, allowing them to immerse themselves in the natural sounds of the safari without any disruptions.

The storage rooms, crucial for maintaining the lodge's functionality, are ingeniously tucked away under the staircase of The Nest Building. This clever use of space not only provides a practical solution for storage needs but also maintains the aesthetic harmony of our safari lodge.

In crafting every aspect of our infrastructure, from solar panels to storage, we aim to seamlessly integrate modern conveniences with the untamed beauty of the safari, creating an eco-conscious haven where luxury meets sustainability.

Restaurant

Ganda la Yai

As part of The Nest Project, we're building The Nest Lodge Restaurant to be something really special. Picture this: a cozy spot where you can see chefs at work in the open kitchen, surrounded by cool African vibes in the lounge. We're all about keeping it green too! With sustainable ideas, we're making a place that's not just tasty but also kind to our planet. Exciting times ahead – stay tuned for a dining experience that's all about good food, good vibes, and the heart of African culture!
